---

**UPDATED:** From the tests carried out to vaccination rate, there are a lot of numbers to keep track of when it comes to following the coronavirus. These graphs and maps give you some of the most essential data for understanding how the pandemic is developing here in Sweden.

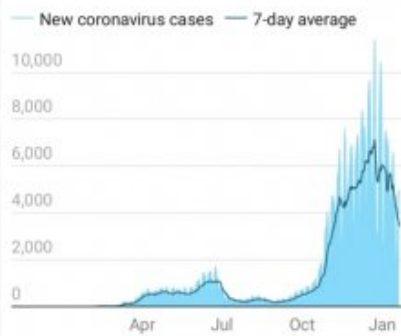

### How many cases have been reported?

This graph shows how the number of daily reported cases has changed. The second graph shows the figures for the capital region of Stockholm only.

Note that there are delays in how Swedish regions report their figures, especially over the weekends, which is a big part of the reason for the dips in the cases reported each week.

#### Confirmed cases of coronavirus in Sweden

Hover over or tap on different parts of the graph to see individual dates and the number for that day (the opaque light blue area) and the 7-day rolling average (darker blue line, as calculated by The Local based on the Public Health Agency's data).

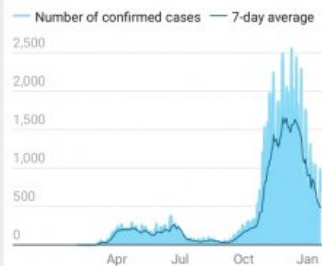

Data correct to the best of our knowledge as of January 21st 2021

Chart: The Local • Source: Public Health Agency • Get the data • Created with Datawrapper

#### Confirmed cases of coronavirus in Stockholm

Hover over or tap on different parts of the graph to see individual dates and the number for that day (the opaque light blue area) and the 7-day rolling average (darker blue line, as calculated by The Local based on the Public Health Agency's data).

Data correct to the best of our knowledge as of January 21st 2021

Chart: The Local • Source: Public Health Agency • Get the data • Created with Datawrapper

## How many people have died?

The graph below is based on Public Health Agency data, which includes deaths where the person had tested positive for Covid-19 in the previous 30 days. There is a lag in reporting which means data is usually not complete for approximately two weeks after the date.

This is not the only way to track coronavirus-related deaths; the National Board of Health and Welfare tracks deaths where the cause of death was listed by a doctor as the coronavirus regardless of whether the person had been diagnosed, and it is also possible to look at excess mortality for a general idea of how the virus has impacted society.

## Deaths linked to the coronavirus in Sweden

Reported deaths by date, where the person tested positive for Covid-19 in the previous 30 days. Hover over or tap on different parts of the graph to see individual dates and the number for that day (the opaque area) and the 7-day rolling average (darker blue line). Deaths are often registered later than they occurred, usually within the previous two weeks but sometimes several weeks earlier. This is why it often looks like there has been a sharp drop in recent days, and means data for at least the most recent two weeks should be considered incomplete.

Data correct to the best of our knowledge as of January 21st 2021

## How many tests are being done?

This shows how many people were tested for an ongoing infection of the coronavirus in Sweden each week. It is useful to compare with the number of cases to get an idea of whether increased or decreased tests could be a factor behind any changes.

### How many tests have been carried out each week in Sweden?

Up until July 5th, the Public Health Agency measured weekly test numbers using the number of people tested for the coronavirus each week. After that, the agency instead measured the number of tests carried out each week. This makes like-for-like comparisons slightly harder before and after this change. From September 28th, both numbers were available so we have used the number of people tested. Hover or tap on the graph to see the figure for specific weeks (date listed is the final day of the week).

Data correct to the best of our knowledge as of January 21st

### Test positivity rate: Stockholm

This shows the percentage of tests carried out which came back positive, and can be a useful indicator of how significant the spread of the virus in society is.

Note that this graph currently only shows data for the period from July 5th onwards, compared to the previous graphs which show data starting in the spring.

### Test positivity rate in Stockholm

The proportion of PCR tests which were positive, according to Public Health Agency data.

Data correct to the best of our knowledge as of January 21st 2021

### Where is the coronavirus spreading in Sweden?

The map below shows which regions saw the highest numbers of new cases per capita in recent weeks. Hover over or tap on areas of the map to see the figures for new cases in total and new cases per capita.

These maps show that the virus is still spreading in almost all parts of the country, but to varying extents. Please note that the shade is based on the range, so the lighter coloured regions do not mean the spread of coronavirus is 'low', just that it is low compared to the rest of Sweden.

### Where is the coronavirus spreading fastest in Sweden?

This map shows the new confirmed cases of coronavirus reported in Sweden's regions during the week ending January 17th 2021 (week 2), the most recent for which data is available. Regions in darker red had a higher number of new cases per capita. Hover over or tap on each region to see both the total number of new cases reported that week, and how many that is per capita.

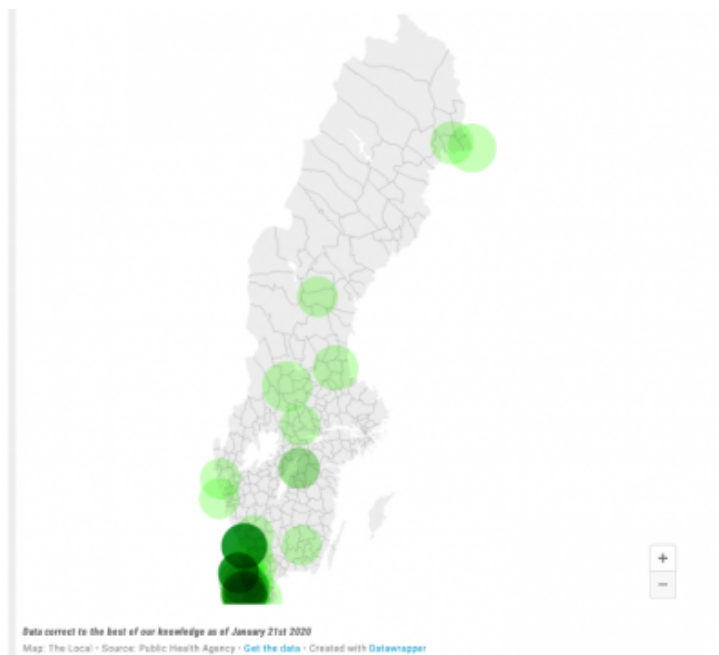

The map below shows all municipalities where more than 50 cases per 10,000 residents were reported in the most recent week with available data.

### Sweden's coronavirus hotspots (by municipality)

In this map you can see all Swedish municipalities where 50 or more new cases of the coronavirus per 10,000 residents were confirmed in the week ending January 17th, 2021 (week 2), the most recent for which data is available. The size of the circle corresponds to cases per 10,000 residents (a larger circle means a higher rate of infection) and the colour responds to the total number of cases (a darker shade means more cases). In the three major city regions of Stockholm, Gothenburg and Malmö, the data for city neighbourhoods (stadsdel) is used instead of municipality.

### How many cases were reported in my neighbourhood?

We've listed every municipality in Sweden in order of the most cases reported per capita in the table below.

### How many new cases did your neighbourhood report last week?

This table lists all of Sweden's municipalities and, for the three major city regions, stadsdelar (neighbourhoods) in order of the most cases per capita reported in week 2 (ending January 17th, 2021). You can search for your municipality by typing it in the box below. Data for one municipality (Bjurholm) is not available for privacy reasons because fewer than 15 cases in total have been reported since the start of the pandemic.

Page 1 of 17 >

| Municipality or neighbourhood | New cases this week per 10,000 residents | Total new cases this week |
|-------------------------------|--|---------------------------|
| Vansbro                       | 84                                       | 57                        |
| Skurup                        | 79                                       | 126                       |
| Haparanda                     | 78                                       | 76                        |
| Burlöv                        | 71                                       | 135                       |
| Malmö Hyllie                  | 71                                       | 274                       |
| Trelleborg                    | 70                                       | 316                       |
| Malmö Fosie                   | 69                                       | 319                       |
| Halmstad                      | 68                                       | 697                       |
| Ockelbo                       | 68                                       | 40                        |
| Malmö Södra Innerstaden       | 67                                       | 245                       |
| Malmö Kirseberg               | 66                                       | 107                       |
| Kävlinge                      | 65                                       | 207                       |
| Landskrona                    | 65                                       | 298                       |
| Malmö Rosengård               | 64                                       | 149                       |
| Vellinge                      | 64                                       | 236                       |
| Åstorp                        | 61                                       | 97                        |
| Kalix                         | 60                                       | 95                        |
| Perstorp                      | 59                                       | 44                        |
| Malmö Centrum                 | 57                                       | 321                       |
| Eslöv                         | 55                                       | 187                       |

Table: The Local • Source: Public Health Agency • Get the data • Created with Dataswrapper

**How many vaccines against Covid-19 have been carried out in Sweden?**

The chart below shows the number of vaccination doses that have been administered in Sweden, based on Public Health Agency data. This data is updated weekly from regional reports, so there is likely a delay.

Most of the Covid-19 vaccines require two doses, several weeks apart, but may start offering some level of protection against serious illness from the first dose. As of January 17th, almost 147,000 vaccine doses had been administered, equivalent to roughly 1.4 percent of the population having one dose.

**How many vaccines have been administered in Sweden?**

This table shows the number of vaccine doses carried out in each of Sweden's regions up until January 17th. The column 'percentage of population vaccinated' is based on each vaccine dose representing a first dose, which the Public Health Agency confirmed was accurate up to this date.

Page 1 of 2 >

| Region          | Vaccines carried out | Percentage of population vaccinated |
|-----------------|----------------------|-------------------------------------|
| Blekinge        | 2,475                | 1.55                                |
| Delarna         | 3,125                | 1.09                                |
| Gotland         | 1,157                | 1.92                                |
| Gävleborg       | 4,040                | 1.40                                |
| Halland         | 2,924                | 0.87                                |
| Jämtland        | 3,125                | 2.39                                |
| Jönköping       | 8,590                | 2.36                                |
| Kalmar          | 4,215                | 1.71                                |
| Kronoberg       | 4,100                | 2.03                                |
| Norrbottn       | 6,064                | 2.43                                |
| Skåne           | 16,025               | 1.15                                |
| Stockholm       | 32,549               | 1.36                                |
| Södermanland    | 6,995                | 2.34                                |
| Uppsala         | 6,217                | 1.60                                |
| Värmland        | 2,677                | 0.95                                |
| Västerbotten    | 3,373                | 1.24                                |
| Västernorrland  | 5,075                | 2.07                                |
| Västmanland     | 5,807                | 2.10                                |
| Västra Götaland | 17,000               | 0.98                                |
| Örebro          | 5,192                | 1.70                                |
